

Military Transport Aircraft

The importance of logistics in warfare has been reiterated in the ongoing Russia-Ukraine conflict. Military transport aircraft have been playing a key role in the transport of men and material to the battlefield as also moving urgent supplies of equipment. The success of SAM systems has also brought into focus the survivability of transport aircraft, while operating in battlefield conditions. We explore transport aircraft options available to militaries today.

Artillery, Rockets and Missiles

When the balloon goes up, artillery, rockets and missiles are key to gaining territory on the battlefield. Traditionally considered as dumb weapons, artillery and rocket systems now feature sophisticated guidance computers and make use of precision munitions, while cruise missiles are a default option on the modern battlefield. We explore the latest developments related to artillery, rockets and missile systems.

French Naval Shipbuilding

The French shipbuilding industry is in a renaissance with sophisticated warships and submarines gaining export customers. The French shipbuilding industry is already moving ahead on a next generation aircraft carrier for the French Navy and the Scorpene conventional submarine programme has been an export success. France can also be expected to capitalise on the gap that will emerge as nation's look to move away from Russian military equipment, following their continued poor performance in the Ukraine conflict.

Maritime Strike Missiles

Navies across the globe today are inducting increasingly stealthier combat vessels equipped with advanced defence systems to defend against modern anti-ship Missiles (AShM) which pose a formidable challenge to these warships. The sinking of the Russian warship Moskva has brought into sharp focus the impact of modern maritime strike missiles. We explore the latest trends in maritime strike missiles

Country Focus: Turkey

The Turkish defence industry has made dramatic inroads into the military export market, with sales successes in SE Asia and the Middle East. Turkish defence equipment has proved their combat worthiness again in the Ukraine. Many nations are looking to build a deeper defence relationship with Turkey, which offers modern military systems in the land, air and sea domains. We explore the way forward for Turkey's defence industry.

Bonus Distribution

Asian Defence Technology May_June 2022 issue will be distributed at Eurosatory 2022, which will take place from 13-17 June at Paris.
